

Inside the laboratory, there are 4 lab tables equidistant from each other. Each contains a microscope at the center of the table. Once walking in the front door, if you walk to the center of the room and turn right, there is a storage cabinet built into the wall. Inside this cabinet are lab instruments such as Petri dishes, test tubes, beakers, and goggles. If you were to keep walking straight down, you would run into a rack containing multiple lab coats. On both sides of the lab tables are more storage cabinets for things such as scales, small surgical knives, gloves, and cleaning supplies. There is a power outlet on the side of each table closest to the door, in order to be able to plug in the microscopes. On the opposite side of the room, there is a sink for washing lab equipment, as well as a wastebasket and recycling bin.
