

Asynchronous Activity
September 29, 2020

In order to get to the laboratory, walk straight down the path you are walking on. Then, turn left as a new path emerges and keep continuing down that path. You should make it to the laboratory's entrance through this path.

Before the laboratory is built, it would need to be designed. I'd construct a design that looks pleasing to the eye and modern. I'd also add what rooms would be necessary to be in the lab such as storage areas and tables used to conduct the actual experiments. We would have to make sure that the laboratory contains the necessary rooms needed to conduct experiments and make sure there is enough room in order to store any important equipment that will be necessary for the experiments themselves. After designing the building I'd go out and purchase the materials needed in order to build the laboratory. We then would go on actually constructing the building itself, carefully going through the design and making sure everything comes out the way it is supposed to look like. The layout will be constructed and from there we would be able to sort out where each room will go. The laboratory would have the main function of serving to help students work on their lab reports and provide a location that allows them to be able to conduct their important experiments and research in peace. Students will be able to conduct any lab assignments they have to do in this facility peacefully.
